

Programme Outcomes (PO's)

1.Computational Knowledge: Apply knowledge of computing fundamentals, computing specialization, mathematics, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements.

2.Problem Analysis: Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences and relevant domain disciplines.

3.Design/Development of Solutions: Design and evaluate solutions for complex computing problems, and design and evaluate systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

4.Conduct Investigations of Complex Computing Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5.Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.

6.Professional Ethics: Understand and commit to professional ethics and cyber regulations responsibilities, and norms of professional computing practice.

7.Life-long learning: Recognize the need and have the ability to engage in independent learning for continual development as a computing professional.

8.Project management and finance: Demonstrate knowledge and understanding of the computing and management principles and apply these to one's own work, as the member and leader in a team to manage projects and in multidisciplinary environments.

9.Communication Efficacy: Communicate effectively with the computing community, and with society at large, about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations and give and understand clear instructions.

10.Societal and Environmental Concern: Understand and assess societal, environmental, health, safety, legal and cultural issues within local and global context, and the consequential responsibilities to professional computing practice.

11.Individual and Teamwork: Function effectively as an individual and as a member or leader in diverse teams and multidisciplinary environments.

12.Innovation and Entrepreneurship: Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and the society at large.
